

Mechanically operated
pneumatic
Valve SV-76M

For **Zero-Point-Systems** and other pneumatic components inside the processing area of machine tools

This valve is made to operate in hardest environments. It is installed directly on the base plate of the clamping system inside the processing area of machine tools. It can operate Zero-Point systems as well as other pneumatic components.

Your **Benefits & Added Value**

What do **machine operators need?**

The tough and competitive business environment and price sensitivity of today's market requires machine operators to increase the machine output. Hence, all they want is to work **quickly, reliably** and as **comfortably** as possible.

You save time

...thanks to quick operating of the system by pushing buttons instead of plugging in and out or reaching to an air pistole or to the display while commissioning.

Your process reliability is guaranteed

...by avoiding electronics, using two-hand-operating and pressure-indicator

You save money

...using robust and maintenance-free product compared to quick couplings, which need to be exchanged frequently

Your productivity is increased

...by ergonomic operation which takes the health and comfort of operators in account while ensuring efficiency in operation.
